

# Youth Sizing Guide

**PRINTERS LIKE TO SHRINK STUFF!**  
Be sure to check the scale of this page with a real ruler before measuring feet.

1. Use a ruler and make sure it matches exactly with the scale on the left. If this page was not printed to scale (e.g., if your print settings were set to "Fit to Printable Area"), then you may end up with the wrong shoe size. There should be no more than 1mm margin of error at the end of the scale.
2. Fold the lower edge along the dotted line. Place the paper on the floor with this edge touching a wall. Use a room with a hard floor, not carpet, and avoid floor molding that will push the paper away from the wall. Tape the paper to the floor if you have trouble keeping it in place.
3. Have your child stand on the paper with the back of his/her bare foot barely touching the wall. The foot should be perpendicular to the wall and your child's weight should be down on this foot.
4. Note the first line the longest toe does not cover or touch. This is your child's recommended Soft Star shoe size with growing room included (see note below). In this example, the foot measures size 5Y:

### Growing Kids?

This sizing chart is for growing kids and accounts for a little wiggle room in the toes and a few months of growing room. If you would like shoes to last a full school year then we recommend ordering one size larger, keeping in mind that the shoes will likely feel too large at first.

Please remember that children often experience unpredictable growth spurts, so finding the best shoe size to last a long time involves a lot of guesswork.
